GearGrid Fire Newsletter

Version 1 2018

Project Spotlight Mountainside, NJ Fire Department

The Mountainside, NJ Fire Department organizes their PPE storage space with several of GearGrid's innovative products. GearGrid's Standard Wall Mount Lockers outline the perimeter of the room, while back-to-back Standard Mobile Lockers allow for more storage in the center of the space. The open-grid design promotes air movement, which minimizes odor build-up and allows damp gear to dry faster. GearGrid's Slinger Workstation is the perfect solution for additional and convenient storage space. GearGrid storage systems are completely modular and let the Mountainside Fire Department maximize their PPE storage space any way they choose.

Happy New Year!

The entire GearGrid team joins in wishing you a Happy New Year! Every year we are thankful for our valued customers. Thank you for your continued business and loyalty with us. We hope 2018 brings you much success and happiness.

Miami System — Width: 49.5" Depth: 31" Height: 74.5"

Suffolk System — Width: 49.5" Depth: 31" Height: 82"

Get Organized with GearGrid's Miami & Suffolk Systems

Fire departments are often faced with the same difficult problem: a lack of storage space for their fire equipment. Couple that with the high cost of gear, and the problem of how to properly store and protect that gear can arise.

To help solve this issue, GearGrid developed a line of equipment storage solutions designed to assist in utilizing space effectively and efficiently. All of GearGrid's innovative storage products are meant to help your department organize your space, while extending the life of your fire gear and equipment.

The Suffolk and Miami Systems are specifically designed for safe gear storage and transport. The versatility of the systems allows for the storage of a variety of equipment, including turnout gear, SCBA cylinders, O₂ cylinders, and duty bags. GearGrid storage systems are completely modular, so you can build your system to meet your exact storage needs while properly storing your equipment.

The units are designed exactly the same, with the only difference being the Suffolk can hold six shelves and the Miami can hold five shelves. These systems are available in fixed or mobile configurations, and they can be outfitted with or without secure doors. A stainless steel hanging rod can also be added to each unit for quick drying and convenient storage.

GearGrid's Suffolk and Miami Systems are built with durability in mind to stand up to the demands of firefighters. GearGrid believes firefighters and their gear deserve to be protected and safe. As a proud American manufacturer, GearGrid ensures our storage solutions do just that.
